PSE Architecture Reference

IQR Tukey Fence - Adaptive 3-Tier Logic

Used in: 4K Apex, 4K Essential, 4K AllDebrid, 4K Hybrid. Selects streams based on peer-group bitrate statistics.

Tier	Condition	Method
Tier 1	4 or more peers	IQR Tukey fence: Q1 - 1.5xIQR to Q3 + 1.5xIQR (statistically sound)
Tier 2	1-3 peers	min/max +/-20% window (thin pool fallback)
Tier 3	0 peers (fresh release)	pow() exponential decay window centred on MEDIAN bitrate

pow() Exponential Decay Formula

Formula: pow(0.95, daysSinceRelease) | +/-40% day 0, +/-9% day 30, ~0% day 90

Day	Window Width	Behaviour
Day 0	+/-40%	Wide acceptance - very few peers
Day 30	+/-9%	Tightening as peer data accumulates
Day 60	+/-2%	Narrow window - likely IQR takes over
Day 90+	~0%	Effectively dormant

Regex Scoring Tiers

53 high-impact regex patterns scored inline across all templates.

Tier	Score	Example Groups
S-Tier	+100	FraMeSToR, BHDStudio (UHD BluRay REMUX)
A-Tier	+80	DON, EbP, SiNNERS (1080p BluRay Encode)
B-Tier	+60	NTb, FLUX, TEPES (WEB-DL)
Penalised	-50	CAM, HDCAM
Penalised	-75	TS, HDTS, TELESYNC
Penalised	-200	R5, SCR, SCREENER

ongoingSeason ESE - Present in All 34 Templates

Prevents season pack downloads during active airing. Activates when ongoingSeason=true and the show is currently between episodes (daysSinceLastAired less than -1 or daysUntilNextEpisode >= 0).

```
((queryType=='series' or queryType=='anime.series') and ongoingSeason and (daysSinceLastAired < -1 or daysUntilNextEpisode >= 0)) ? seasonPack(streams, 'onlySeasons') : []
```
