PSE Architecture Reference

IQR Tukey Fence Pattern

Used in: 4K Apex, 4K Apex TorBox, 4K Hybrid, 4K Essential, 4K AllDebrid. 3-tier adaptive logic per quality tier:

≥ 4 peers	IQR Tukey fence	$Q1 - 1.5 \times IQR \rightarrow Q3 + 1.5 \times IQR$ (statistically sound outlier removal)
1–3 peers	Min/Max ±20%	$\min(\text{bitrates}) \times 0.80 \rightarrow \max(\text{bitrates}) \times 1.20$ (thin pool, IQR unstable)
0 peers	pow() age-decay	$MEDIAN \times (1 - 0.4 \times \text{pow}(0.95, \text{daysSinceRelease})) \rightarrow \text{upper bound}$ symmetric ±40% day 0 · ±9% day 30 · ~0% day 90

ongoingSeason ESE

Present in all 34 templates. Prevents season pack results during active airing of a show.

```
((queryType=='series' or queryType=='anime.series') and ongoingSeason
and (daysSinceLastAired < -1 or daysUntilNextEpisode >= 0))
? seasonPack(streams, 'onlySeasons') : []
```

TorBox-Priority PSE Pattern (4K Hybrid)

Each IQR tier in 4K Hybrid has a TorBox-priority twin that returns [] if no TorBox streams match, causing fallthrough to the all-service PSE:

```
service(size(bitrate(STREAMS, IQR_LO, IQR_HI), '15GB'), 'torbox')
```
